

The end-to-end Agentic AI platform for the modern SOC.

Unlike many “AI SOC” tool-set solutions meant to enhance legacy SOC assets, CYREBRO automates the full SOC operating model; people, process, and technology. CYREBRO has evolved the SOC process — enabling providers to deliver state-level managed security at global scale.

- AVAILABLE TODAY
- PROVEN IN PRODUCTION
- BUILT BY SOC OPERATORS, NOT VENDORS
- VENDOR-AGNOSTIC

WHAT CYREBRO IS

CYREBRO began as a legacy white-glove MSSP serving global enterprises and government organizations. To enable the company's own scale, it built an **Agentic SOC Operating System** to automate the entire SOC operating model. Following its own success with the platform, CYREBRO created the SOC OS platform and began licensing it to service providers. The SOC OS solution enables providers to run state-level security operations without building a SOC from scratch and maintaining a deep bench of cyber analysts. With CYREBRO, MSPs can truly **become the MSSP** instead of reselling another organization's MDR service — enabling better margins, a direct customer relationship, and doing so without requiring analyst hiring.

WHY THE LEGACY SOC MODEL HITS A WALL

Alerts outpace staffing
Volumes climb faster than analysts can be hired, and analysts become the bottleneck.

Tool sprawl fragments ops
A different stack per customer makes investigation manual and inconsistent.

Growth crushes margins
More customers demand more headcount — scaling the business erodes profitability.

More customers → more alerts → more analysts → lower margins

THE PROOF: CYREBRO’S EXPERIENCE WITH ITS AGENTIC SOC OS

AS A LEGACY MSSP

reduction in human SOC activity

HOURS & DAYS BECOME SECONDS & MINUTES

SOC ACTIVITY	LEGACY MSSP	CYREBRO SOC OS
Alert triage	5–30 min	Seconds
Cross-tool correlation	1–4 hours	Seconds
Full investigation	2–8 hours+	Minutes
Case documentation	20–60 min	Automatic
Response orchestration	30–120 min	Seconds to minutes

WHAT MAKES THE PLATFORM DIFFERENT

-  **Vendor-agnostic ingestion**
Any vendor, any language — CYREBRO owns parsing and normalization end-to-end, including one-off and non-English sources.
-  **End-to-end automation**
Ingestion through investigation, response, and reporting — people, process, and technology, autonomously.
-  **Self-learning & self-optimizing**
Detections recalibrate continuously against live data; processes evolve and enhance, reducing false positives over time.
-  **MSSP-native Hyper-SIEM**
A distributed correlation engine co-developed with Google — infinite horizontal scale, petabyte search in seconds.
-  **Native multi-tenancy**
Hundreds of client environments run segmented, with zero performance cross-talk.
-  **Learn once, alert universally**
A technique discovered at one tenant hardens every other tenant — intelligence compounds and the benefits extend across the entire end-user base.

LEGACY SOC VS. AGENTIC AUTOMATION

SOC FUNCTION	LEGACY SOC	CYREBRO SOC OS
Ingestion	Manual, tech-dependent	Autonomous, vendor-agnostic
Triage	Manual prioritization	Autonomous classify & suppress
Investigation	Analyst-driven	Multi-agent with timeline
Case mgmt	Manual notes & tickets	Auto-created & closed
Detection tuning	Periodic, human	Continuous, self-learning
Reporting	Manual audit prep	Automated exec & audit

AUTOMATION FLEET

19

AI agents
across 8 families, leveraging extensive reasoning agents

200+

Automated workflows
across 34 families — 42 automation families in total

267

Vendors supported
across 29 security categories — with the ability to add any vendor and ingest logs in any language

BUILT FOR EVERY KIND OF PROVIDER

MSP	MSSP	Carrier	SI
ADD SECURITY Launch state-level security without building a SOC. Become the MSSP — better margins, direct relationship.	CUT STACK COST Replace SIEM, SOAR, and other tech assets while maintaining the same (or better) client offering. Lower cost, no lock-in.	EXTEND REACH Add state-level services and augment the carrier SOC to cost effectively expand coverage and increase customer value.	BUILD AND OPERATE PROGRAMS Architect and operate client security programs without maintaining SOC infrastructure project to project.

WHY PARTNERS CHOOSE CYREBRO

-  **Universal ingestion**
Built for the multi-vendor, multi-language, multi-tenant reality in which service providers operate, enabling support of a limitless stack vs a limited standardized enterprise stack.
-  **Cross-tenant intelligence**
Learn once, alert universally: every tenant benefits the moment a threat is seen anywhere in the base.
-  **Own data plane + service option**
Own a white-labeled platform, with optional CYREBRO human SOC support as a safety net, with no MDR to resell.
